

Laboratory Colonies  
of  
Insects, Mites and Ticks  
in Canada

Prepared by the Entomological Society of Canada  
June, 1973

## LABORATORY COLONIES OF INSECTS, MITES AND TICKS IN CANADA

This is the second list prepared by the Entomological Society of Canada and supercedes that published as a supplement to *Bulletin* 3(2) in June, 1971.

The cooperation of 100 custodians who provided the information, and the institutions they represent; taxonomists of the Entomology Research Institute, who checked the scientific names; and stenographers of Research Program Services Section, Agriculture Canada, Ottawa, who typed the manuscript, is gratefully acknowledged. Common names are those given in "Common Names of Insects Approved by the Entomological Society of America" published in December, 1970. The 211 species given are arranged alphabetically in 12 systematic orders. Custodians are listed from east to west by their institutions.

There has been a slight reduction in numbers compared to the 1971 list: 100 versus 108 cooperators, 210 versus 220 species, 12 versus 13 orders, and 398 versus 447 individual colonies, in 1973 and 1971, respectively.

A similar list published by Agricultural Research Service, United States Department of Agriculture, has been discontinued since 1970.

Chairman, Committee on Insect Colonies
